Aman Deep Tripathi

Product and Commercialization Lead

Wisk Aero (A fully owned subsidiary of The Boeing Company)

San Francisco, California, USA | Email: aman.tripathi@berkeley.edu | LinkedIn Profile | +1 510 944 2283

SUMMARY

Product and Commercialization Lead at Wisk Aero, a wholly-owned subsidiary of The Boeing Company developing Autonomous Electric Vertical Take-off and Landing (eVTOL) aircraft.

Lead the Market Requirements & Objectives (MR&Os) and business case for Wisk's Generation 6 aircraft — the first Wisk generation aircraft built to formal market requirements. Additionally, lead Wisk's future products strategy and requirements across the company. Own the investment case supporting Wisk's program funding, totaling several hundred million dollars annually. Co-author of two foundational Concepts of Operations for Urban Air Mobility (Wisk–Boeing and Wisk–Skyports), that are referenced across the international Advanced Air Mobility (AAM) standards and policy community, with collaborations spanning NASA, FAA, ICAO, Skyports, JAL, and Air New Zealand.

Service to the profession includes membership in Transportation Research Board (TRB) Standing Committee on Aviation Market Economics and Analysis (AV012), advisor for the International Civil Aviation Organization (ICAO) AAM Study Group, peer reviewer for international aerospace and transportation journals, and judging for the CES Innovation Awards, the Global AAM Awards, and university hackathons and engineering competitions. Earlier career at Caterpillar included establishing a major engine manufacturing facility and deploying its MES and ERP systems.

Education background includes M.Eng. Operations Research, UC Berkeley; B.Tech Mechanical Engineering, NIT Warangal with an exchange year at Politecnico di Torino.

CAREER HISTORY

Product and Commercialization Lead — Wisk Aero (Boeing) 2018-Present

Mountain View, California, USA

Product Management & Strategy

- Lead the Market Requirements & Objectives (MR&Os) for the Generation 6 autonomous eVTOL aircraft and Wisk airline; Set the product direction for Wisk Aero by balancing market demand against engineering feasibility, certification path, and unit economics.
- Established the technical roadmap for 800+ engineers and for the 10+ years of aircraft certification program by leading development and management of 100+ Product and Service Requirements and Concept of Operations for Gen 6 aircraft & service.
- Define and own the Generation 6 program's commercial and technical Key Performance Indicators (KPIs) — including aircraft range and payload, Cost per available seat mile (CASM), weather and noise requirements, bill-of-materials cost, maintenance cost, and battery cost

— that drive trade-study decisions across engineering, certification, and commercial functions.

- Define Wisk's future product portfolio beyond Generation 6, leading the evaluation of market opportunity, technical feasibility, and commercial pathway for next-generation passenger aircraft and cargo variants in partnership with Wisk's executive team and Boeing leadership.
- Serve as the program's technical product lead, owning critical trade studies and integration across finance, engineering, go-to-market, and airline operations.
- Authored Wisk's Los Angeles Go-to-Market and Entry-into-Service Blueprint, defining vertiport locations, airline and infrastructure partnerships, phased rollout plan, and financial commitments for Wisk's first commercial market.

Long-Range Business Plan and Gen 6 Aircraft Business Case:

- Built the financial models and investor materials used by Wisk leadership in fundraising activities supporting >$1 Billion raised to date; the LRBP and business case directly inform capital allocation across all Wisk functions.
- Led the cross-functional initiative to build Wisk's Long-Range Business Plan (LRBP), defining the company's multi-year expenditure architecture across 50+ teams and 800+ engineers.
- Own Wisk's business case end-to-end, including unit economics, commercial pathway analysis, and the program-level strategic inputs that feed Boeing executive decision-making.

Thought Leadership and Industry Contributions:

- Co-authored the Wisk–Boeing Concept of Operations for Uncrewed Urban Air Mobility, defining the technical and strategic framework for integrating autonomous aviation into the National Airspace System (NAS); the document anchors the work of multiple Wisk engineering functions — including remote supervision, autonomy, and systems engineering — and is widely referenced across the AAM standards, regulatory, and policy community.
- Collaborated with NASA on airspace and autonomy enablement, contributing to NASA's ConOps development and supporting the NASA AAM Campaign to integrate eVTOLs into the National Airspace System; co-authored joint technical publications.
- Co-authored the Wisk–Skyports Concept of Operations, defining how autonomous eVTOL aircraft will integrate with vertiport operations and Providers of Services for UAM (PSUs).
- Established the engineering effort and team to design eVTOL-specific Instrument Flight Rules (IFR) routes and set the roadmap to get novel procedures approved by FAA.
- Support Wisk's strategic technical partnerships with AvionX, Skyports, Jeppesen, SkyGrid, Air New Zealand, and NASA, integrating partner capabilities into Wisk's product and operational architecture.

Data Science and Enterprise Systems

- Built data science tools in Python and MATLAB for vertiport throughput and sizing, aircraft range, weather envelope, propulsion sizing, and IFR route analysis.
- Led development of an integrated simulation framework for Wisk operations, modeling aircraft, airspace, vertiports, routes, passengers, and personnel as a connected system.
- Contributed to the technical direction of SCOPE, Wisk's publicly documented data science & simulation platform, shaping how autonomous flight operations are modeled & analyzed.

- Designed the enterprise systems architecture integrating PLM, ERP, and MES platforms to support FAA production certification; served as project lead for ERP and MES deployment.

Graduate Student Instructor — University of California, Berkeley Jan-May 2018

Berkeley, California, USA

- Taught "Physics for Future Presidents" (Department of Physics), UC Berkeley's renowned 400+ student undergraduate course applying physics-based reasoning to public policy and leadership decisions. The course, created by Prof. Richard A. Muller (MacArthur Fellow) and based on his eponymous book, has previously been voted the best class at Berkeley.

Manufacturing / Design Engineer — Caterpillar Inc. 2014-2017

Chennai, India

- Key member of the team that established a $10M+ engine assembly line with annual capacity of 20,000 units, transitioning the facility from concept, design, process validation and pilot build to volume production.
- Designed the engine assembly process flow and developed the process planning documentation — work instructions, visual aids, PFMEAs, control plans, and tooling plans — for 20+ engine variants; owned BOM updates and engineering change notices (ECNs) for the facility.
- Led the testing and deployment of the facility's Manufacturing Execution System (MES) and ERP routing/component supply configuration, integrating production control across the line.
- Coordinated 10+ vendors for on-time delivery, commissioning, and validation of facility machines and conveyors; trained 30+ production operators on systems and practices.
- Identified bottlenecks and improved takt time from 14 minutes to 10 minutes, enabling the facility to reach planned volume-production capacity.

DAAD WISE Fellow/Research Assistant — Technical University of Berlin May-Jul 2013

Berlin, Germany

- Conducted research in the Department of Rail Vehicles on the SUSTRAIL project, an EU-funded program to develop sustainable freight railway technology; supported by a DAAD WISE Fellowship.
- Analyzed the running behavior of freight bogies and proposed an optimized rail wheel profile; verified the profile's efficacy against the Manchester Benchmarks for rail vehicle simulation.

EDUCATION

University of California, Berkeley, USA | 2017–2018

Master of Engineering, Industrial Engineering and Operations Research

- Capstone: Reinforcement Learning for Optimal Trade on High-Frequency Trade Data.

Politecnico di Torino, Turin, Italy | 2013–2014

Erasmus Mundus Exchange Student for Final year of Undergrad, Automotive Engineering

- Research assistant, Department of Mechanical Engineering — radial turbine performance.

National Institute of Technology (NIT) Warangal, Warangal, India | 2010–2014[1]

B.Tech, Mechanical Engineering

- Department Rank: 1; GPA: 4.0/4.0 (2010-2013[1])

PUBLICATIONS

- Wisk Aero and The Boeing Company. Concept of Operations for Uncrewed Urban Air Mobility, v1.0 (September 2022) and v2.0 (December 2023). Co-authored by A. Tripathi (one of three lead co-authors). Available here;
    - Selected media coverage of the document: Avionics International, Simple Flying, sUAS News, Skies Magazine, Aviation International News, AviationPros, AOPA, Flying Magazine, Military Aerospace, ASDNews, Axios
- Wisk Aero and Skyports. Concept of Operations: Autonomous AAM Aircraft Operations and Vertiport Integration (April 2022). Co-authored by A. Tripathi (one of 2 Wisk lead authors). Available here.
    - Selected media coverage of the document: eVTOL Insights, Unmanned Airspace, Business Airport International, Avionics International, Urban Air Mobility News, Airport Technology, DroneDJ, Aviation Week, Air Traffic Technology International
- Tripathi, A., Garber, J., Clarke, L., Zhyla, M., Homola, J., Dao, Q., Omar, F., Glaab, L., McSwain, R., Schaefer, J., & Petty, B. (2023). *Missed Approach Procedures in Advanced Air Mobility: Conceptual Exploration*. AIAA AVIATION Forum and Exposition, San Diego, CA, June 12–16, 2023. AIAA Paper 2023-3408. DOI: 10.2514/6.2023-3408. Also available via NASA NTRS.

PATENTS

Non-Provisional Patent Applications (in USPTO examination):

- Tripathi, A., et al. Emergency Landing Zone Techniques for Autonomous Aircraft. Provisional filed February 2025; non-provisional filed February 2026.
- Tripathi, A., et al. Regional Analysis for Vertiport Configurations. Provisional filed January 2025; non-provisional filed January 2026.

Provisional Patent Applications:

- Tripathi, A., et al. Critical Landing Hazard Avoidance for Remotely Supervised Aircraft. U.S. Provisional Patent Application filed December 2025.
- Tripathi, A., et al. System and Method for Generating Deconflicted and Optimized IFR Routes and Flight Plans for UAM. U.S. Provisional Patent Application filed March 2026.
- Tripathi, A., et al. Cooperative Landing Site Negotiation between Aircraft and Landing Sites. U.S. Provisional Patent Application filed May 2026.

COMMITTEE APPOINTMENTS

- Member, Standing Technical Committee on Aviation Market Economics and Analysis (AV012) — Transportation Research Board (TRB), National Academies of Sciences, Engineering, and Medicine. Three-year appointment, August 2025 – April 2028.
- Advisor, Advanced Air Mobility Study Group (AAM SG) — International Civil Aviation Organization (ICAO), United Nations specialized agency for international civil aviation. Expert advisory body established by the ICAO Secretariat in response to a mandate from the 41st Session of the ICAO Assembly, tasked with developing a holistic vision and globally harmonized framework for AAM operations across all 193 ICAO member states.

INVITED TALKS AND CONFERENCE PRESENTATIONS

- "Zero Emission Aircraft" — International Industry Working Group (IIWG), Istanbul, Türkiye, May 2023. Invited speaker (virtual presentation). The IIWG is a high-level industry forum co-led by Airports Council International (ACI), the International Air Transport Association (IATA), and the International Coordinating Council of Aerospace Industries Associations (ICCAIA).
- Advanced Air Mobility Summit — Aviation Business Networking Club, Embry-Riddle Aeronautical University Prescott, October 1, 2025. Invited panelist. Multi-organization panel on emerging AAM technologies and eVTOL aircraft, alongside representatives from Future

Flight Global, and Eve Air Mobility. Co-hosted by Embry-Riddle's College of Business, Security & Intelligence.

- Ohio Air Mobility Symposium (OAMX) — “The Future of Advanced Air Mobility”, November 2025 (virtual, 90-minute featured event). Invited as featured speaker for a solo conversation on autonomous eVTOL product strategy, the Wisk–Boeing Concept of Operations, and Wisk's Generation 6 program.
- AIAA Phoenix Section Meeting — “Wisk Aero's Generation 6 Aircraft and the Concept of Operations for Autonomous AAM”, March 2026 (virtual). Invited featured speaker. Presented a comprehensive overview of Wisk's Generation 6 program, vertiport infrastructure, the Wisk–Boeing ConOps, business model, and unit economics.
- AIAA Aviation Forum 2026 at San Diego, CA — "Building the Future of Autonomous Flight: Product Management Lessons from Next-Generation eVTOL Development", June 2026. Technical Lecture session on product management for next-generation autonomous eVTOL development, covering Concept of Operations translation, autonomy road mapping, cost modeling, operations modeling, and certification-commercial alignment.
- TRB Symposium on Aviation Innovation and Research, Dayton, OH — "Time for a Reality Check: What Will It Take to Make Advanced Air Mobility Viable?" — Lecture and then a panel session, June 2026. Invited panelist alongside representatives from Joby Aviation (Ryan Naru), North Carolina Department of Transportation (Jason Schronce), and Embry-Riddle Aeronautical University (Daniel Friedenzohn); moderated by Reiner Pelzer (AECOM).
- "Rising to the Moment: Advanced Air Mobility Infrastructure Needs" — Poster Session, TRB Symposium on Aviation Innovation and Research, Dayton, OH, June 2026. Poster presenter. Transportation Research Board (National Academies of Sciences, Engineering, and Medicine).

PEER REVIEW — JOURNALS AND CONFERENCE MANUSCRIPTS

- **Journal of Air Transportation (JAT)** — American Institute of Aeronautics and Astronautics (AIAA). Reviewer for 6 original research manuscripts.
- **TRB Annual Meeting** — Transportation Research Board, National Academies of Sciences, Engineering, and Medicine. Reviewer for 7 original research manuscripts (2026 meeting).
- **Travel Behaviour and Society** — Elsevier (Hong Kong Society for Transportation Studies). Reviewer for 1 manuscript and its subsequent revision.
- **Research in Transportation Business & Management** — Elsevier, Reviewer for 1 original research manuscript.

AWARDS PANEL AND COMPETITION JUDGING

- **Consumer Electronics Show (CES) Innovation Awards 2026** — Sustainability and Energy Transition Award — Consumer Technology Association (CTA). Invited industry judge; evaluated 22 products. The CES Innovation Awards 2026 received over 3,600 submissions

and use a highly selective panel of industry experts to identify the year's most significant technological advancements in product design and engineering.

- **University of Washington Foster School of Business** — Undergraduate Case Study Competition — Invited judge, May 2026. In addition, help author the case study (focused on Wisk) used by the UoW teaching team to structure the competition for 65+ student teams with 480+ students working on Wisk's case study for 1 month as part of a business course.
- **Global AAM Awards 2026 by eVTOL Insights** — Invited judge for two categories of "Small Engineering Team of the Year" and "Global Ecosystem Partner of the Yea" for a principal industry awards program dedicated to Advanced Air Mobility.
- **CODiE Awards 2025** — Best Compliance Solution category — Software & Information Industry Association (SIIA). Invited judge; Also evaluated 200+ products across multiple categories in the final competition and conducted direct product-evaluation interviews with finalist companies for the Best Compliance Solution category. The CODiE Awards, founded in 1986, are regarded as the technology industry's most prestigious peer-reviewed awards program; SIIA represents nearly 400 companies globally.
- **Cal Hacks 12.0** — Hackathons @ Berkeley, University of California, Berkeley. Invited judge for the world's largest collegiate hackathon, held at the Palace of Fine Arts, San Francisco, October 2025.
- **UC Berkeley AI Hackathon 2026** — By Hackathons@Berkeley. Judge for one of the world's largest collegiate AI hackathons — 1,300+ hackers and 300+ projects competing for $100,000 in prizes — held at UC Berkeley, June 2026.

MEDIA COVERAGE AND FEATURED PROFILES

- "Wisk assesses 'flyability' of key markets based on weather" — Paul Brinkmann, *Aerospace America* (flagship publication of the American Institute of Aeronautics and Astronautics, AIAA), May 1, 2026. Feature article extensively quoting Aman on Wisk's flyability matrix methodology for evaluating eVTOL operational viability across cities and weather conditions. Read article.
- "Inside Wisk's Autonomous Air Taxi Vision: Aman Tripathi on the Future of Urban Air Mobility" — Sangeeta Saxena, *Aviation & Defence Universe (ADU)*, May 12, 2026. Featured Q&A interview on autonomous eVTOL product strategy, the Generation 6 program, the Wisk–Boeing Concept of Operations, NASA and FAA collaborations, and the long-term market opportunity. Read interview.

EDUCATIONAL AWARDS

- **Fung Fellowship**, by UC Berkeley, 2018
- **Erasmus Mundus Scholarship**, by European Union, 2013
- **DAAD WISE Fellowship**, by Germany, 2013
- **Dean's List & Merit Scholars**, for each year of undergraduate study at NIT Warangal
